

## One Stop for all Testing and Isolation Solutions

Perth, Australia based CK Energy Services have recently expanded the range of products available to their customers. Initially established as a designer and manufacturer of joint pressure testing tools and high pressure plugs for sale and hire, they now offer a wide range of complimentary products.

The latest addition to their range is the heat exchanger isolation and test plugs from Netherlands based manufacturer IPCO. The IPCO range of products offer a safe, reliable and easy to operate solution for pressure testing heat exchanger plugs and isolating those that leak. This allows plant operators to safely extend the life of their heat exchangers. Up to 10% of leaking exchanger tubes can be isolated, without effecting the efficiency of the system.

CK Energy Managing Director, Keith Howlett commented: "We are delighted to have signed our distribution agreement with IPCO. It adds another tier of pressure testing and isolation solutions to our growing portfolio. Our customers can now literally test, close and record data on their joints all with equipment from one source, CK Energy Services."

Another great example of the company's commitment to providing exceptional customer service with an extensive range of products to match.
